

## The Future and/or Legacy of...

### Recommendations

Ask at One East Midlands conference 26 November whether people (a) want to do something about this; and (b) whether they are prepared to put some resources into it or spend some time getting some resources

If there does appear to be an appetite to do something and to commit resources from (a) organisations and partners (b) spend time with local “movers and shakers”, including infrastructure organisations, consortia leads, representatives etc. to further scope out an action plan.

Approach commissioners and other funders to continue the dialogue and identify what’s possible.

Make a decision on next steps.

## ISSUES TO THINK ABOUT

What are the needs for a OEM-type organisation (hereafter **OEM**) in the medium term?

What geography works best in the medium term?

What sorts of Issues are priorities?

Is there a specific *way of working* that makes an **OEM** required?

What Resources are available, or likely, in the medium term?

Is there an organisational structure that fits the bill?

How do we get there from here?

R2D2 AND C3PO

***BUT DOES D2N2 NEED A CP30\* ?***
